This works for the following phone companies: ATT/SBC, Verizon, Windstream/Alltel

For ATT/SBC, you MUST add "@netlink.net" to your username (ie., example@netlink.net)

If your area code is 740, and Verizon is your phone provider, you do not need this guide. Once you have everything hooked up, simply open up a web browser such as Internet Explorer, and it should work
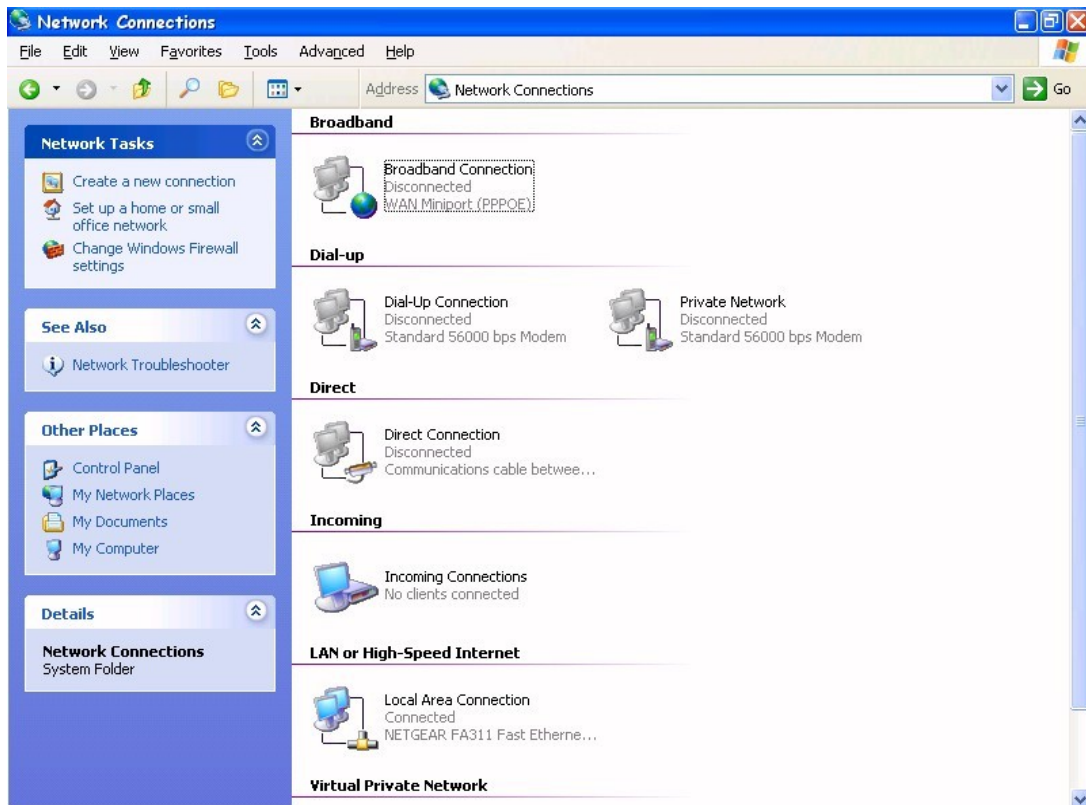

Setting up Windows XP for Netlink DSL

Click on the "Start" button
Click on "Run"
In the run box, type "ncpa.cpl"

This will open up the "Network Connections" window. On the left hand side, click on "Create new connection"

This will open up the new connection wizard. Press "Next" on the Welcome screen

Press "Next" again for "Connect to the Internet"

Here, go ahead and choose "Setup my connection manually" and press "Next"

On this screen choose "Connect using a Broadband modem that requires a username and password" and press "Next"

Then type in "Netlink" for the ISP name, press "Next"

Type in your username and password (do not forget to type in your password in the "confirm password" field as well) then press "Next"

Go ahead and put a check-mark next to "Add a shortcut to this connection to my desktop" and press "Finish"

On the connection screen that pops up, go ahead and click "Connect"

Once it says its connected, you can go ahead and open up Internet Explorer or whatever web browser you use to browse the Internet! Keep in mind, whenever you turn off your computer, disconnect your connection, or restart your modem, you will need to double-click on your Netlink icon on your desktop and tell it to connect.
